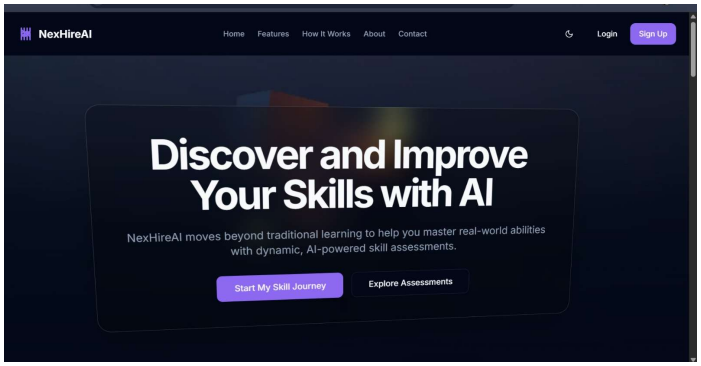
Under the Guidance of: Dr. Ramesh Dadi, Asst. Professor, School of CS&AI

INTRODUCTION

NexHireAI is an AI-based recruitment tool that aims to enhance the conventional hiring system, which is usually time-intensive, biased, and relates to resumes. The system does not solely use profiles but measures the candidates by their actual performance by using assessments and AI-driven interviews.

The platform combines practice-based learning, adaptive testing, and real-time analytics in order to develop a full hiring pipeline. It is used to assist a candidate in sharpening his or her abilities and assist the recruiters to take faster, unbiased and data-driven choices.



PROBLEM STATEMENT

Recruitment modernity is still based on short listing through resumes and hand scoring which has caused inefficiency in recruitment. The recruiters waste a lot of time in screening applications and selection is usually based on how the resume is formatted and not on skills.

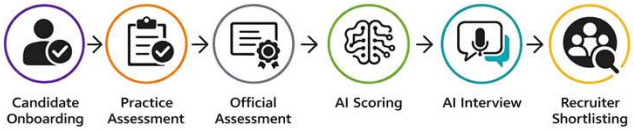
There is no standardized framework between assessment, analysis, and interview processes and talented applicants may be lost. This leads to a subjective, slow and disjointed process of hiring which is not precise and consistent.

OBJECTIVES

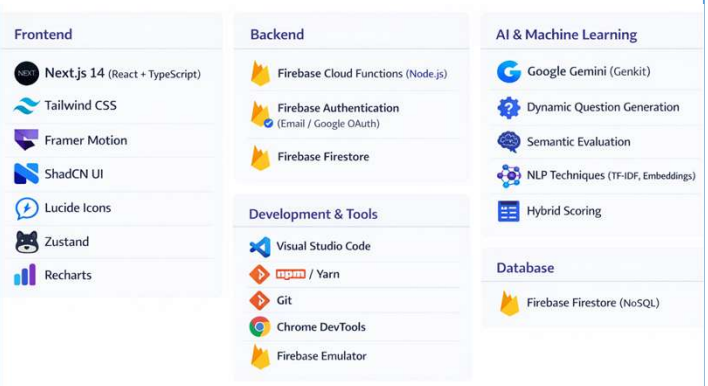
1. Design an AI-based skill-based recruitment system.
2. Create dynamic and role-specific tests based on AI.
3. Give instant feedback and performance indicators.
4. Interview AI-based interviews with analysis of responses.
5. Provide equal, objective, and open hiring.
6. Enhance applicant education and interaction.

OVERVIEW OF THE SOLUTION

NexHireAI is an artificial intelligence recruitment platform that automates the process of screening the candidates and analyzes the skills by providing adaptive tests and AI interviews. It offers real-time insights, instant scoring and performance analytics, which allows companies to make faster, fair and data-based hiring choices.



TECH STACK



CONCLUSION

NexHireAI successfully demonstrates how Artificial Intelligence can transform recruitment into a faster, fairer, and more efficient process. By combining assessments, AI interviews, and analytics into an end-to-end pipeline, the system improves both hiring quality and candidate experience.

The platform reduces bias, saves time, and provides meaningful insights, making it a scalable and future-ready solution for modern recruitment systems.

ACKNOWLEDGEMENT

We would like to thank **SR University, School of Computer Science & AI**, and our mentor: Dr. Ramesh Dadi for their guidance and support throughout the project.
